SUMMARY

I am a Software Engineer ready to tackle any problem presented to me and transform it into a digital solution.

SKILLS

- | | | |
|-----------------------------|------------------------------------|----------------------|
| • C#, Python, TypeScript | • GIS Development | • Clean Architecture |
| • React | • Geospatial Data | • Data Processing |
| • .NET / ASP.NET Core | • ETL Pipelines | • API Integration |
| • Databases & System Design | • Messaging & Queues (RabbitMQ) | • Version Control |
| • PostgreSQL / PostGIS | • Design Patterns (CQRS, Mediator) | • Agile / SCRUM |

EXPERIENCE

AIAEC | Software Engineer

Beirut, Lebanon | **02.2025 - Present**

- Built scalable full-stack systems using React (TypeScript) and .NET, following Clean Architecture and clean code
- Owned end-to-end GIS workflows, from data collection to storage, querying, and map visualization
- Coordinated with GIS engineers on geospatial models, processing pipelines, and visualization
- Refactored backend systems, migrating Python services to .NET with clear abstraction layers
- Applied CQRS and Mediator patterns to improve separation of concerns
- Designed and optimized PostgreSQL / PostGIS schemas for large geospatial datasets
- Used Python for geospatial processing, map generation, and high-volume inserts
- Built ETL pipelines with .NET, Python, RabbitMQ, and background workers
- Developed data ingestion pipelines with validation and fault tolerance
- Integrated backend systems with external ML services
- Worked in Agile / SCRUM teams on planning and estimation

SmartSoft | Frontend Developer (Internship)

Tyre, Lebanon | **06.2023 - 10.2023**

Check the certificate [here](#)

- Implementing seamless and user-friendly Interfaces for an ERP project
- Managing global state using Redux

- Cooperating with an ASP.NET core backend team for the API development (using axios)
- Using Ag-Grid to organize, filter and sort fetched data
- Implementing navigation using React Router
- Using MaterialUI for generating better user experience
- Using TypeScript for better documentation and readability

PROJECTS

<u>Rentify</u> Rentify is a web app connecting property owners and tenants for streamlined rentals. Owners can manage property listings, while tenants can search and sort properties by criteria like rent and location. Tech Stack: React, Vite, MaterialUI (Frontend); ASP.NET Core Web API, MSSQLSERVER (Backend).	<u>Dream Dwell</u> Dream-Dwell is a comprehensive hotel management system developed in PHP, offering functionalities for both customers and administrators. Key features include authentication and authorization mechanisms, enabling secure access and management of hotel operations.	<u>Original Clothing</u> OriginalClothing is a web application simulating an online clothing store, utilizing Angular.js with the UI library PrimeNG. The project offers a foundation for e-commerce functionalities.
